INTRODUCTION

Sindh, one of the provinces of Pakistan in Asia and the Pacific, is highly vulnerable to recurrent flood in 2020 due to heavy rains. Extreme topographical variations and unstable steep slopes combined with torrential rain during the monsoon season result in frequent floods in landslides. These disasters cause heavy loss of life, property and damage infrastructure, thereby disrupting the social and economic development of the country. In addition to these natural process, development activities and increasing population have caused further vulnerability and destabilization of land resources. Due to heavy rain fall and man-made infrastructure turned the rain down in flood in District Dadu of Sindh province. Further, the estimated water flow was four lac Cusic that produced 25 feet high tide near to Nai Gaj diversion band. Heavy water damaged the flood protection band (FP Band) near Johi Taluka (South Johi) and fully as well as partially damaged 11 Union Councils and more than 185 villages.

On 10th August 2020, 80 Dehs of Taluka Johi District Dadu are declared as “Calamity affected areas” by the Relief Commissioner - Government Sindh under Sindh National Calamities (P&R) Act 1958. According to RNA the 80 Dehs of Taluka Johi District Dadu are most affected.

DISTRICT GOVERNMENT IMMEDIATE ACTION TAKEN

Deputy Commissioner Dadu conducted a meeting with the Local NGOs working in the district and announced Dadu Disaster Management Consortium (DDMC) of 06 experienced organizations. In addition he also shared that all the flood relief work will be implemented under the supervision of this Consortium.

RNA

Consortium member organizations is working from last three to fifteen years in the district dadu more than 100+ male and female staff members along with 25000 direct beneficiaries with direct contact. DDMC member organizations jointly conducted the RNA Rapid Need Assessment.

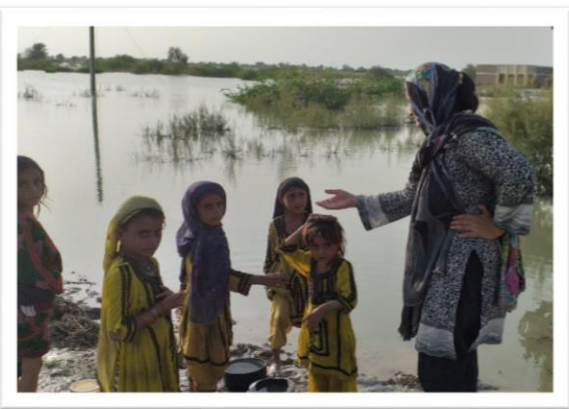

OBJECTIVES

The objectives of the Rapid Need Assessment were to

- Assess the current situation of flash flooding after heavy rains.
- Determine the extent and magnitude of damages that occurred due to flash flood
- Identify the immediate community needs to develop the recommendations and immediate actions to address the humanitarian need to minimize the crisis. 80 Dehs of Taluka Johi District Dadu

METHODOLOGY

DDMC carried out a Rapid Needs Assessment in 80 Dehs affected Taluka Johi district of Dadu. DDMC team visited the affected areas to collect the information from the district authorities and communities and conducted physical observation and verification of the situation.

FOLLOWING UNION COUNCILS ARE MOST AFFECTED UCs BY FLASH FLOOD DUE TO HEAVY RAINS.

KEY ISSUES AT THE TIME OF ASSESSMENY

- ☞ Communications
- ☞ Transportation
- ☞ Life protection (people which encounter in the flood)
- ☞ Drinking water (Safe and clean)
- ☞ Shelter
- ☞ Food Relief
- ☞ Medical Care
- ☞ Fodder for animals

DISTRIBUTION OF FOOD RELIEF PACKAGE

DDMC and Government of Sindh has arranged medical camps for proving medical services in many of the places and in temporary shelter spaces. In few areas, food distribution is done by Consortium member organizations.

MEDICAL CAMPS

Consortium member organizations collaboration with Health Department and District Government Dadu, organized 08 medical camps in the flood effected areas, where 326 patients physically treated and provided free medicine.

CONCLUSION AND RECOMMENDATIONS

There is dire need to provide early relief to the survivors of affected areas and then provision of support for the restoration of their livelihood. People in temporary shelters and those residing in their homes but have difficult access to necessities require following relief packages as most of them have lost their household items or devoid of food and water.

FOOD PACKAGE

Initially, food is provided by Consortium member organizations including DDMC in many areas. Now, these families need food ration for at least 15 days until they restore their livelihoods and living space.

HOUSE HOLD ITEMS (NFIs)

Immediate need for household items (NFI) support identified such as Bedding or floor mats, kitchen kits (sets), hygiene items (kits), and jerry cans or large water storage pot with lid covers.

WASH

- The local bodies in Sindh had completed their four-year tenure. In the absence of local-level elected representatives, it is challenging to ensure coordination among local authorities and communities.
- Safe and clean drinking water is an immediate need and could be supplied through Basic Disaster Supplies Kit. As health risks are associated with the use of contaminated and untreated water for drinking purpose

LIVELIHOOD

- Majority of the affected population are Farmers daily wage laborer, run small enterprises or grocery shops so, their source of livelihood disrupted and limited now. Cash-based programming for vulnerable families needed to fulfil their immediate need.
- Much need supports for shopkeepers and small enterprises as they may able recover their losses.

SHELTERS

- Immediate support needed for shelter repair and renovation, as a large number of shelters have damaged completely and partially.
- Families with completely damaged shelters are in immediate need of Emergency Shelter kit or temporary arrangements for the living. The significant number of households are living in high-risk conditions without proper protection, as most of them do not have another immediate alternate to live.

HEALTH

Due to stagnant water in affected areas, there is a significant risk of mosquitos and other vectors growth. This may cause the spread of vector-borne diseases at large scales such as malaria, diarrhea, dengue and hepatitis. The poor hygienic conditions may also result in the spread and outbreak of other highly contagious diseases such as measles and pneumonia. These may affect the vulnerable population such as children, pregnant women and person of old age and with disabilities. Health-related activities such as mobile camps through trained health care providers including curative and preventive activities should be initiated to minimize the risks of morbidities and mortalities.

Limitations of RNA:

There are some of the short comings and limitations of such rapid assessments during emergencies. Due to time constraint and difficulty in access to all areas, selection of respondents and ensuring inclusion, communication to majority of most affected and vulnerable population is compromised therefore; the assessment may not be able to produce comprehensive information. Information from various sources and from different assessments may not be comparable.

NOTIFICATION AND FLASH FLOOD WARNING
